Stokes, J.P., Royster, L.H., Pearson, R.G. and Royster, J.D.: Subjective Evaluation of a Prototype Earmuff Exhibiting Flat and Nonlinear Attenuation Characteristics. *Am. Ind. Hyg. Assoc. J.* 52:653-659, 1991

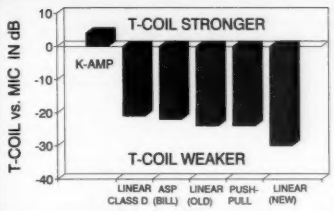
Jay McSpaden, Ph.D., is a professor, consultant, clinical audiologist and a board member of the National Institute for Hearing Instruments Studies. He is a well-known lecturer and has authored numerous articles on hearing related subjects.

Ralph Hickok, M.S., BC-HIS, is a hearing aid specialist at a hearing and speech clinic in Oregon. His many years of experience include hearing instrument repair, fabrication, sales and instruction of students in the field.

Patrick R. Burkett, M.D. received his medical degree in 1960, and served in the U.S. Navy Medical Corps for 20 years. After military retirement, he was in private practice until he retired in 1992. Dr. Burkett has been involved in general aviation as a pilot for many years.

This study was supported by a grant from Telex Communications, Inc., 9600 Aldrich Avenue South, Minneapolis, MN 55420.

K-AMP TELECOILS:
STRONGEST AND *FLAT*



With most hearing aids, switching from microphone to telecoil drops the output 15-25 dB and rolls off the lows. The telecoil output on K-AMP® hearing aids is comparable to the microphone output, with no loss of lows.

(The K-AMP circuit has 30 dB of reserve gain, which is applied to the weak telecoil signal.)
